

MetaTrader 4 Order Duplication Plugin

Introduction

The Order Duplication plugin is designed to groups of account's orders into a master account. Once installed and setup, it will monitor the desired groups and duplicate all the account's orders into a master account.

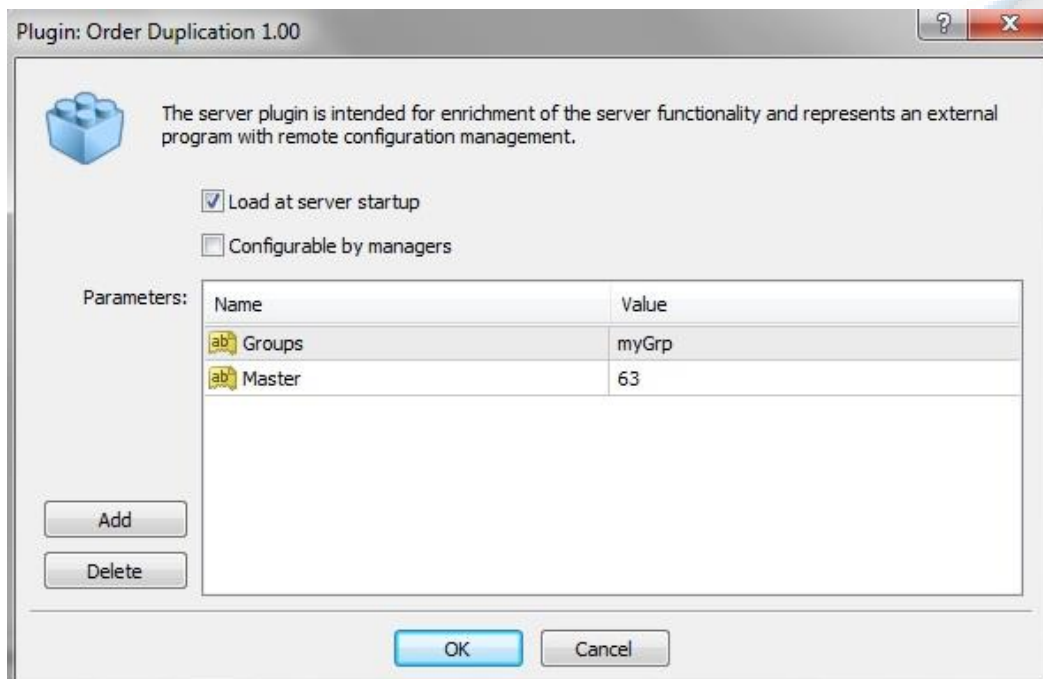

Plugin Installation

To install the plugin, the MetaTrader Server 4 program has to be stopped temporary before copying the OrderDuplication.dll file into the "MetaTraderServer4/plugin" in the server root directory.

1. To stop the server, click on Start > Administrative Tools > Services.
2. Under the Services window, look for MetaTrader Server 4 and click it.
3. On the General tab, under Service status, click on the "Stop" button and wait for the MetaTrader server to stop.
4. Transfer/Copy the OrderDuplication.dll file into the server root directory "plugin" folder.
5. Go back to Services window, click "Start" button to start the MetaTrader Server 4 program.

Plugin Configuration

After installation of the plugin, it is necessary to configure its settings.

Parameter	Description
Groups	Groups processed by the Order Duplication plugin. The groups can be listed using templates. For example, demo* - all demo groups, !real,* - all groups except for the real ones, demoforex-usd , demoforex-jpy - only groups named demoforex-usd and demoforex-jpy, respectively.
Master	A trading account designated as one of the master account for order duplication.

After configuration of the plugin, the MetaTrader Server 4 program has to be restarted for the new configuration to take effect. To restart, look to the top left of the MT Administrator 4 program and click it.

Working with the plugin

Trading accounts designated as the master account are to be opened and placed in a group in the system.
